

# ATSSim 3.0 Release Notes

03/26/2022

Version 1.20

## *General Changes*

- Updated were made to Swagger configuration files use for our API documentation to show the most up to date API data throughout ATSSim. Specifically, the Licensing, Observer, User Organization, Communication, Timer, File Sharing, Event Planning and MSEL Library services. [ATSSIM-2654, ATSSIM-2660, ATSSIM-2661, ATSSIM-2667, ATSSIM-2675, ATSSIM-2676, ATSSIM-2677, ATSSIM-2668]
- Updated icon that represents a map inject. [ATSSIM-2656]
- Fixed logging in Communication service when an event is created it will log the Event Identifier correctly and when injects are fired it logs the Inject Identifier correctly [ATSSIM-2672, ATSSIM-2674]
- Added the ability for a user to change their password on their account settings page. [ATSSIM-2670]

## *File Sharing*

- Added helper text that lists supported file types that can be uploaded along with the maximum size anywhere uploading files are available. [ATSSIM-2655]

## *Master Scenario Event List (MSEL)*

- Updated the behavior so that Simulated Injects are not removed from the viewer once marked as completed. [ATSSIM-2680]
- Updated the SMS Inject type's content sent to the users to reformat the message. [ATSSIM-2625]
- Updated Email Inject format to have less clutter and repeated information [ATSSIM-2621]
- Updated the publishing of a MSEL to the MSEL library so that those users that publish a MSEL (as restricted) can actually view that MSEL in the library at a later time. [ATSSIM-2688]
- Updated the New Inject panel to have Start Date/Time to be before Map Inject Trigger [ATSSIM-2681]
- Updates to the actions that can be taken against an inject to match the various states an inject can be in during an event. When an inject is Completed, it's state can no longer be set to any other state. When an

Inject has been injected, the only state a user can change the state to is Complete. [ATSSIM-2666]

- Updated the creation and editing of inject from within the MSEL Library to remove calls to other services and functions that were not needed when in the MSEL Library [ATSSIM-2700, ATSSIM-2701, ATSSIM-2698]

### *Event Planning*

- Fixed a defect where a leading comma was being displayed when removing a role from a list of several roles on the Event Roles page. [ATSSIM-2650]
- A few updates made to the Event Roles page. Update to not permit a user to add a role to an event that has already been added. Fixed a defect when editing the Participants, the previously edited participant was being displayed [ATSSIM-2665]
- Updated when adding Event Roles in Participant settings for when the Add Another check box is checked to hold on to the value of the organization as well as stay checked, all other values cleared. User must uncheck the box when adding their last role for panel to close and values to be cleared. [ATSSIM-2679]

### *Simulation Capability*

- Fixed an issue where the Player Debug and Event Debug panels would overlap each other when opening them both. Now when one panel is open and the other is requested to be open, the original one will be closed prior to opening the new panel [ATSSIM-2664]
- Added a customizable deaggregation radius. Users will now be able to define the radius area for deaggregating entities. [ATSSIM-1669]
- Fixed issue where duplicating established events with different start Date/Times resulted in negative/invalid reporting data [ATSSIM-2647]
- 

### *Observer Tool*

- Fixed an defect when editing an inject and adding tasks, the tasks did not show up on Observations related to the updated inject. [ATSSIM-2283]

### *Administration Pages*

- When disabling an entity on the Entities administration page the text now properly displays “deactivate” instead of “delete”. [ATSSIM-2658]

- Changed hover text on the Entities deactivate button to say “deactivate” instead of “delete. [ATSSIM-2659]
- Added ability to clear filters within the Published Task Organization page. The user can now select a filter (e.g., denied) and then clear the filter by selecting the X in the filter box. [ATSSIM-2663]
- Removed isActive column from the Role Management table. [ATSSIM-2652]
- Updated when Adding Another is checked in the role management add panel so that it holds the value of the check box. User must uncheck the box on last role creation for panel to close. [ATSSIM-2678]
- Updated the Edit Organization function on the Organization Management page. The requirements for what are needed under point of contact was adjusted along with an update to an error message that was incorrectly stating the error was during a create versus an edit. [ATSSIM-2673]
- Update the validation of the Point of Contact phone number to match the validation logic for phone numbers used elsewhere in ATSSim [ATSSIM-2548]
- Added ability to delete and recover published task organizations. Users can now delete any approved or denied published task organizations. They can also recover those later. Pending published task organizations cannot be directly deleted, they will need to be either approved or denied first to then delete. Any deleted task organizations are not available to use when building task organizations within an event. [ATSSIM-2671]
- Fixed a defect with the incorrect number for the total number of running events on the main Administration Dashboard. The number now reflects the correct number. [ATSSIM-2697]
