

ATSim 3.0 Release Notes

Oct 1, 2021

Version 1.10

General

- Update to all notification messages to ensure they wrap and are readable to the user.

Roles and Permissions

- Added read-only view of the different Roles and their Permissions within Administration Dashboard

MSEL Development and Management

- Address Book:
 - Added ability for user to choose whether they want to replace the entire address book or add to it during the import process.
 - Added ability to manually add more than one contact without closing out the right-panel.
 - Added helper context to describe format of email and phone numbers.
 - Added a confirmation popup window when attempting to delete a contact to get the user to acknowledge the action.
 - Fixed a defect during edit of a contact that was forcing a user to provide a phone number (phone number is not required).
- MSEL Import Process
 - Added ability for user to choose whether they want to replace the entire MSEL or add to it during the import process
- Added support for tracking inject change history, with ability to revert to previous versions.
- Fixed an issue where multiple attachments on an inject were not being uploaded and persisted correctly for that inject.
- Updated the functionality to use the Senders list as the Reply To field, if the Reply Field is not utilized.
- Added ability to have parent-child inject relationships to all inject types. Prior to this fix, the "Simulated" injects did not have the ability to be in a parent-child relationship.

File Sharing

- Added the ability for users to cut-n-paste both file and folders from within the File Sharing repository.

Simulation Capability

- Added ability to disable/enable Decon sites from the main context menu
- Update ArcGIS online group creation to move the creation process to when a layer is added versus every time the map is loaded. This will cut down on the number of groups we store. We have a limit to the number of groups.
- Added measurement tool-bar widget for measuring distances and areas.

Observer

- Update the templates used when downloading the observations (PPTX, DOCX, CSV) to use more formal names for Category and Assessment.
- Updated the MSEL panel to indicate parent-child relationships with injects (if any exist)
- Event Planning – Post Event Reporting: Users now have ability to view and edit observations from within this panel.
 - Observations - Observation List
 - AAR – Analysis of Capabilities

Master Simulation Components

- Fixed a defect with a missing Capabilities and Task link from the left-hand side navigation in the Master Simulation Components admin workspace.
- Fixed the column width in the Effects workspace so the table stays a fixed size.
- Fixed an issue with an incorrect error message coming back when attempting to add an Effect that already exists.
- Added a missing description to the Entities page.
- User interface updates to the different master scenario component pages to ensure they all had the same styled search bar.
- Added a missing description to the Effects page.
- Update the Organization Capabilities and Tasks management page to make the page align with the overall style of other master simulation components page design. This includes Search bar to the right of the page and filters to the left of the page. Also updated the overall style of the listing of the capabilities and tasks to take up more of the page.
- Updates to the email that gets sent when approval of a Published Task Organization

Event Library

- Update to the user interface to match the styles of the MSEL Library

MSEL Library

- Added ability to clear filters for searching through MSELs.

User Management

- Added a Pending Approvals table inside of User Management to help administrators easily locate those new registration that need approved and activated.
- Updated the Roles that can be assigned to a user account to be one of the System Account Roles (Super Admin, ATS Admin, Org Admin, Regular Users or Event Creator)

- Added more User Interface indicators (e.g., loading circle) to give the user more feedback of the processes happening on the user management page.
- Updated the creation of new users inside of User Management. Updates include
 - Auto-generate a temporary password to be sent to the user. User will have to change password upon logging in.
 - Enable the user to set the System Role for the new user account that is being created.
 - Updated email that is sent to user to include correct link to login to ATSSim.

Licensing

- Introduced Named-License support as
- Added License Management and License Administration to the Admin Dashboard. Ported the older versions of these pages into the new ATSSim user interface.
-

Planning Event

- Introduced new Operational Planning Event capability into the ATSSim Suite. Operational Planning Events allow a user to running different planning scenarios of an event and to simulate different outcomes based on those planning scenarios. The Operational Planning Event can also be used during an actual event as a decision-support tool.
- Added Geo Enrichment support to planning tool to enable users to query various data from ESRI.
 - Data includes: Population data, people at risk, languages, and ages
 - Add support for build your own custom query by utilizing ESRI's Data browser, allowing users to explore ArcGIS data browser and pull in other rich GIS data from ESRI.
