

# ATSSim 3.0 Release Notes

Oct 15, 2021

Version 1.11

## General

- Updated the Uniform Resource Locator (URL) for ATSSim to remove the need for adding /v3 to the end of the URL. User can now access ATSSim by <https://atssim.com> (ATSSIM-1574)
- Added a link to the ATS Community on the Login page. (ATSSIM-2108)
- Updated the Registration Page and Forgot Password Page to ensure they could support translations to other languages. (ATSSIM-1837)
- Updated the Administration Dashboard Running Events page to ensure they could support translations to other languages. (ATSSIM-1838)
- Disabled the Create Event button, once it has been selected, to allow the event to finish being created. This will prevent the user from selecting the Create Event more than once. (ATSSIM-1946)
- Removed the atssim service from the deployment environment. This atssim service is no longer in use. (ATSSIM-2148)
- Removed the chat\_service service from the deployment environment. This chat\_service service is no longer in use. (ATSSIM-2149)

## Roles and Permissions

- Addressed a defect where non-administrator accounts could not select or create capabilities and tasks within an event. (ATSSIM-2166)
- Added permissions to the MSEL Library to limit which System Roles have access to the MSEL Library. (ATSSIM-1972)
- Addressed a defect to add Event Planning Permissions to the user that is creating an Event from the Event Library. The users will be given Lead Planner and Builder permissions when creating an event from the Event Library (ATSSIM-1973)
- Fixed several defects on the Event Planning pages. These included: (ATSSIM-2110)
  - Fixed issue causing error message to be sent when a regular participant entered the Map.
  - Update the permissions on the Testing page to ensure that those with Lead Planner, Planner, Builder page can see all tests that were created and create new tests.
  - Fixed an issue to allow a regular participant to access the File Sharing page in event planning to provide them the ability to share files.

## MSEL Development and Management

- Changed the default sort order of the list of injects to default to the start date and time. (ATSSIM-2109)
- Fixed a typo in the optional metadata element Author Name Contact. (ATSSIM-2142)
- Updated the optional metadata element Mannequin Conditions to change Mannequins to Mannequins Quantity. (ATSSIM-2143)
- Combined the Roleplayer and Roleplayer Condition into one optional metadata element called Roleplayer Conditions. (ATSSIM-2144)
- Updated the order of tasks added to an inject to be in numeric order. (ATSSIM-2175)

## File Sharing

- Added support for downloading folders. (ATSSIM-2112)

## Simulation Capability

- Addressed a defect where Action Sites (Decon, S&E, Fuel, etc) could be created as children of building and facilities in the task organization. Updated the context menu to not allow the creation of Action Sites as children of buildings and facilities. (ATSSIM-1888)
- Added the ability for the user to select which unit to display when refueling entities that require fuel. The user can now select liters or gallons. (ATSSIM-2165)
- Fixed a defect when a user is attempting to build out a task organization from a published task organization that is large. The page would become unresponsive if the task organization was large. To address this issue, we remove the icons that were part of the task organization because they are not needed in rendering the task organization on the client during the “add from published task organization” process. The icons are maintained and are present in the task organization once the “add from published task organization” process completes. (ATSSIM-2067)
- Addressed several issues with editing Decon Action Sites. (ATSSIM-2135)
  - Fixed an issue when editing a Decon Action Site caused additional attraction and clean sites (KML) to be duplicated regardless of what was edited during the update.
  - Fixed an issue where when deleting a Decon Action Site the Decon Tent was not deleted from the map.
  - Update to not allow the deletion of the Decon Site until all entities have been processed.
  - Updated an issue where when deleting a supply always deleted the first supply in the list. Now the actual supply being deleted is deleted.
- Addressed a defect within Supply Management where inactive supplies were being shown to the users. The Supply Management process was updated to only show active supplies. (ATSSIM-2147)
- Updated the functionality of placing multiple entities on the map, by removing the right-hand slide out asking for the perimeter distance and made this a stacked window in the left-hand slide out. (ATSSIM-2152)
- Fixed a defect where the red dot indicator next to an entity that was going through a Decon Site was not being removed once the entity was successfully through Decon. (ATSSIM-2160)

- Added a feature to allow a user to select whether they want to see Liters or Gallons when refueling an entity. (ATSSIM-2165)

## Observer

- Update made to not permit regular participants in the exercise to access the Observation Tool. Only users that have Lead Observer and Observer permissions should be able to access the Observation Tool. (ATSSIM-2133)
- Fixed a defect to correctly show whether an inject has a parent inject or not. This change was made to the page where a user is recording the observation. (ATSSIM-2134)
- Fixed a defect that was not permitting a user with Observer rights to record observations. This was fixed by adjusting the new permissions of an Observer role. (ATSSIM-2157)

## Master Simulation Components

- Fixed a defect to ensure the users name was used in the audit log for changes to any icons. This allows us to track who is changing icons or icon attributes within ATSSim. (ATSSIM-2077)
- Upon approval of a published task organization, an email is now sent back to the user that published the task organization to indicate the approval status of the task organization that was being published. (ATSSIM-2087)
- Update the Capabilities and Task pages to expand the width of the capabilities and task user interface elements. (ATSSIM-2014)
- Fixed a defect in Entity Attribution Class creation where the Change History window could not be closed if it was opened. Also remove the View History link from the right-hand panel when creating new Entity Attribute Classes, since there is no history during the initial creation. (ATSSIM-2122)
- Fixed an issue where users could not upload new icons in the Icon Management tool. An incorrect permission was being checked. (ATSSIM-2167)

## Organization Management

- Added an icon to the list of organizations in the Organization Management page to quickly help identify which organizations have licenses. (ATSSIM-2036)
- During the deletion of an organization, added a confirmation dialog, to ensure the user really wants to delete the organization. (ATSSIM-2119)
- Added notifications during the creation of organizations to notify the user if there were any errors during the creation process or not. (ATSSIM-2120)

## Event Testing

- Updated the creation of Test Event to place a timestamp at the end of the default name for the test. This will allow the unique identification of the test event created if the users decides not to create a unique name. (ATSSIM-2141)
- Fixed a permission defect once the new Test Event was created that was stopping the user who created the Test Event from entering the Event. (ATSSIM-2156)

## User Management

- An update was made when creating users accounts from within the User Management page. We no longer ask the user to create a new password for the account. ATSSim will auto generate a password to include in the email that is being sent to the user. Also removed the Force Password Reset on Login checkbox. ATSSim will automatically force this when the user attempts to login, no longer need the user creating the user account to check this box. Also added the ability to select the System Account role for the user account being created. (ATSSIM-2037)

## Licensing

- An update was made to deactivate an organizations license when that organization is deactivated from within the Organization Management page. (ATSSIM-2057)
- An update was made to include the permissions and roles to the Named License model pages. This will limit who can assign, update, and delete licenses from within the License Administration pages. (ATSSIM-2099)
- During the deletion of a license, added a confirmation dialog, to ensure the user really wants to delete the license. (ATSSIM-2119)

## Event Planning

- Fixed a defect where the capability could not be added to the training event's training objective. (ATSSIM-2125)
- Fixed a defect when removing users from a Planning Group did not completely remove their permissions for the event. (ATSSIM-2132)
