ATSsim 3.0 Release Notes

Nov 1, 2021

Version 1.12

General

- Added ability to measure speed test (up and down speeds) from within ATSsim. An indicator was added to the Map view that shows a strength indicator. Also added ability for users to run a speed test manually (ATSSIM-2158)

Roles and Permissions

- Fixed a defect where a Participant was receiving an error when they entered the Map. Updated the permissions for the Participant so they can retrieve the appropriate data needed for initializing the Map. (ATSSIM-2176)
- Observers and Lead Observers have permissions to access the map, but do not have permissions to get Data Exchange or Sim Deck data needed for the map to load. Updated the data loads for these from onload of the Map, to on load of the actual menu items. Observers and Lead Observers do not have these menu items; therefore, the errors are eliminated. (ATSSIM-2155)
- Adjusted the permissions for the Post-Event Reporting pages to ensure that Lead Planner, Planner, Viewers, Facilitators, Observers and Lead Observers have access to these pages and can make the appropriate edits. (ATSSIM-2111)
- Adjusted the permissions for the Event Library and MSEL Library to only allow those users that have Admin roles or Event Creator role (ATSSIM-2111)
- Adjusted the permissions for the File Sharing to allow a participant to delete files (ATSSIM-2111)
- Added Page Access permission for the Event Planning Publishing page for Lead Planner, Planner, Builder, and Facilitator Roles. (ATSSIM-2178)
- Adjusted Permissions so that only participants with Builder and Facilitator rights can update Timer Settings such as converting to and from simulated time and adjusting the refresh rate of the timer tick (ATSSIM-2191)
- Lead Observers were not receiving simulated injects. Permissions were implemented so that all participants with Facilitator, Lead Observer, and Observer roles now receive all simulated injects along with the correct recipients (ATSSIM-2180)
- Participants with Lead Observer and Observer rights had permissions to access the AAR but could not enter Event Planning (the only way to get to the AAR). Permissions were adjusted so that these participants can now access Event Overview (but not edit data),

File Sharing (with the ability to upload and delete files) and AAR Pages (and update this data). (ATSSIM-2179)

- Updated permissions to allow Builders and Facilitators the ability to edit the status of an inject to unapproved or deferred. (ATSSIM-2237)
- Updated permission for the Observer to ensure that they are now only able to edit their own observations on the observations list page in event planning. (ATSSIM-2233)
- Fixed a defect where a license error notification on dashboard was displayed for users with a System Role of Regular Users and Event Creators (ATSSIM-2229)

File Sharing

- Fixed a defect seen while copying an event with a file that did not exist on the server but existed in the database. Previously, this scenario would crash filesharing. Now if the file doesn't exist on the server or in the database, the file is skipped while trying to copy the event. (ATSSIM-2230)
- Fixed a defect that was allowing the upload of a .kmz file. KMZ files are not supported at this time. A notification is now sent when a user attempts to upload a KMZ file. (ATSSIM-2227)

Simulation Capability

- When an event was duplicated (under the Advanced Settings for the Event), and new name was provided for the copied event, the new name was not being used in any inject emails that were sent to a participant. Fixed a defect to make sure the correct event name was used in the inject that was sent. (ATSSIM-2170)
- Added ability to search for and filter the list of published task organizations when adding a published task organization to an exercise. (ATSSIM-2195)
- Remove the ability for participants to assign/re-assign Stations. Only Facilitators should have this permission (ATSSIM-2174)
- Fixed a defect where a new folder or entity that was added to the task organization was not shown until the user refreshed their page (ATSSIM-2164)
- Added the ability to refuel all the entities within Aggregates and Folders. There is now a panel that will allow you to select specific entities from the list and pick what station they refuel at as well as the amount. (ATSSIM-1567)
- Fixed issue where Fuel Site throughput rate wasn't being considered. (ATSSIM-1567)
- Fixed issue where the current entity action wasn't being displayed during refuel. (ATSSIM-1567)
- Fixed issues where entities were recreated that didn't need to be when editing a Decon site. Generators and water pumps will now preserve their fuel levels upon edit if the selected master entity isn't edited. (ATSSIM-2117)

Observer

- When a user with Observer or Lead Observer permissions entered the mobile version of the Observer Tool, their carousel was not listing any Events for them to enter. An update was made to fix an issue with loading the event list for the observer. (ATSSIM-2177)
- The checkbox to mark an observation as key was never limited on who could see or use it. Permissions were implemented so that only Lead Observers can mark an observation as a key observation. Once an observation is marked as key, the Participant that created it will no longer be able to edit the observation. (ATSSIM-2190)

Master Simulation Components

- Redesigned the Create and Edit Entity Page to address several user interface issues and optimize the creation and editing of entities. (ATSSIM-2118)
- Updated the Effects page to include the Affected Entity Types in the effects table to give a quick look at what entity types the Effect effects. (ATSSIM-2123)
- Fixed a defect to allow the creation and editing of a Construction Type attribute class (ATSSIM-2226)
- Fixed a defect where the Search and Extraction attribute classes were not being retrieved and displayed (ATSSIM-2206)
- Fixed a defect where "Press Esc to Clear Search" was not working on the Entities page (ATSSIM-2192)
- Fixed a defect where the audit log for the Effects was not displaying the correct changes to the effect (ATSSIM-2153)
- Removed the View Log action button from the Published Task Orgs page. There is no log information created for Published Task Orgs (ATSSIM-2113)

Chat

- Fixed a defect where the default chat sessions were not being created when an event was duplicated through a new Test Event, Created from Event Library or Duplicate Event feature. (ATSSIM-2100)

User Management

- Added the ability to reset a user's password through the User Management tool. The adminstrator has two options to reset the password. Option 1 is to generate an email that gets sent to the user with a new password. The user will be forced to reset password upon login. Option 2 is to generate a new password for the user. The password will have to be shared with the user and the user will be forced to reset the password upon initial login. (ATSSIM-2154)
- Fixed defect that caused the page to crash when refreshing User Management and opening a user's login history panel. (ATSSIM-2121)

Licensing

- Initial implementation of the Named User License Model. (ATSSIM-2042)
- When the new Licensing pages were created, there was an issue with loading only active organizations rather than all organizations. This caused an error in the License and Affiliate History tables displaying inactive licenses for organizations that have been deleted. The License Management and License Administration pages now load all organizations and display licenses that belonged to inactive organizations. (ATSSIM-2105)
- Minor UI updates to the assign user licenses process for named user licenses. Assigning user licenses was moved out of the create/edit license panel. This process is now in its own panel, opened by clicking the "Assign Users" button in the "Actions" section of a license row in the organization's licenses table. Admin may now also set start and end dates for an individual user license. (ATSSIM-2140)
- Updated the User's Dashboard to hide the creation of a Planning Event, if that user does not have a license to the Planning Tool. (ATSSIM-2173)
- Fixed a defect that was not allowing a user to create an affiliate license (ATSSIM-2161)
